DETAILED ACTION

Election/Restrictions

Claims 17-34 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7. Please note that claim 30 was labeled twice by the applicant. Therefore, the second occurrence of claim 30 has now been renumbered as 31, and the rest of claims 31-35 have been now been renumbered as 32-36, respectively.

Claim Rejections - 35 USC § 112

Claim 3 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The applicant does not provide support as mentioned in claim 3 for the chamber to have an opening that is not sufficiently large to allow the chair to refill with air.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3636

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 12-16, and 35-36 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis et al.

Davis et al show a furniture assembly comprising a chair (1) comprising an air permeable bladder (2), a filler disposed within the air permeable bladder, and a vacuum chamber has a partial opening.

With claim 2, the partially opened vacuum chamber has a portion that is gathered together without forming an airtight seal.

With claim 3, the partially opened vacuum chamber has an opening that is not sufficient to allow the chair to refill with air.

With claim 4, the partial opening allows the chair to partially refill with air.

With claim 12, a storage container has an opening to receive the chair and vacuum chamber.

With claim 13, the storage container is constructed from an air permeable material.

With claim 14, the storage container is constructed of an air impermeable material.

With claim 15, a minimal amount of air is allowed inside the vacuum chamber.

With claim 16, the bladder comprises a flaccid material.

Claim Rejections - 35 USC § 103

Art Unit: 3636

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 5-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis et al.

Davis et al disclose the claimed invention except for the chair to be compressed as the following ranges: about 1% to about 99% of the original volume, about 4% to about 50% of the original volume, about 5% to about 25% of the original volume, about 5% to about 15% of the original volume, about 6% to about 99%, about 8% to about 50% of the original volume, and about 10% to about 25% of the original volume. It would have been obvious to one having ordinary skill in the art at the time the invention was made to specify the chair to be compressed as the following ranges: about 1% to about 99% of the volume, about 4% to about 50% of the original volume, about 5% to about 25% of the original volume, about 5% to about 15% of the original volume, about 6% to about 99%, about 8% to about 50% of the original volume, and about 10% to

Art Unit: 3636

about 25% of the original volume, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

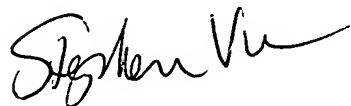

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Larger, GB 2214071, Wilcox, Jones, Park, Conley, Lederman, and Chou are cited as showing similar types of furniture assembly.
